

HYDRAULIC CYLINDERS - EATON E-SERIES

RIMS Engineering are distributors for global leader Eaton Hydraulics.

Eaton's E-Series range of cylinders are highly reliable and cost effective and are particularly suited to agricultural and mobile machinery applications.

The E-Series achieve a longer service life with skived steel, a quality honed barrel and hard chromed rod using high tensile material for additional durability.

The use of 5-piece piston seals makes for excellent wear resistance. The cylinders are designed with a quality welded end cap and forged steel clevis for additional strength.

They have a slim line design and standardized mounting dimensions. Spare parts including seal kits are readily available and they are available in most standard strokes.

Technical specifications:

- Bore diameter: from 1.5" up to 4.0"
- Standard stroke: from 6" up to 48"
- Pressure rating: up to 210 bar dependant on bore size

Eaton's range also includes:

- Aeroquip (aerospace & automotive),
- Char-Lynn (HTLS gerotor motors & steering valves),
- Vickers (vane & piston pumps and motors, solenoid valves and proportional valves),
- Duffield,
- Dynapower,
- Hydrokraft,
- Inter-Normen &
- Weatherhead.

Further details available on request. Please call the RIMS Engineering team to advise on the best fit for your equipment.
