

# FILTRATION EQUIPMENT

RIMS Engineering is your one stop filtration shop. We supply a vast array of filtration products to suit an almost limitless range of applications - oil, water, air, fuel, chemical, beverage or anything else!

RIMS Engineering are proud distributors of Parker filtration products. Parker is a world leader in process filtration and continually strive to provide improved filtration systems for critical processes on every continent.

Parker filtration products include the Domnick Hunter, Baldwin, Racor, Balston, Zander, Hiross & Hyperchill ranges.

## Interchangeable Elements

Our filter elements will fit most other brands of filter housings. Parker's Parfit elements are interchangeable, allowing you to obtain all your filter elements from a single source regardless of the brand you're currently using. A quick and easy solution saving you time and preventing unnecessary delays.

## Industrial Dryers

RIMS Engineering distribute Parker brand desiccant and refrigeration dryers as well as water cooling and chilling systems.

Adsorption (Desiccant) Dryers are the simplest and most reliable method of ensuring your sensitive equipment is not exposed to damaging moisture by passing air over a regenerative adsorbent material which strips the moisture from the air. Applications include clean dry air for pneumatic use and auto-body painting.

Refrigeration dryers remove contaminants from the air using heat exchangers to separate condensate.

## Filtration Servicing

RIMS Engineering can undertake regular servicing of your filtration system ensuring optimum performance and efficiency. We can create a scheduled preventative maintenance program specific to the needs of your business.

We have trained technicians available to assess and solve pneumatic and filtration system issues both on and off site. Our purpose built clean room and test bench facility ensure repairs are high quality and tested to meet quality and efficiency requirements.
